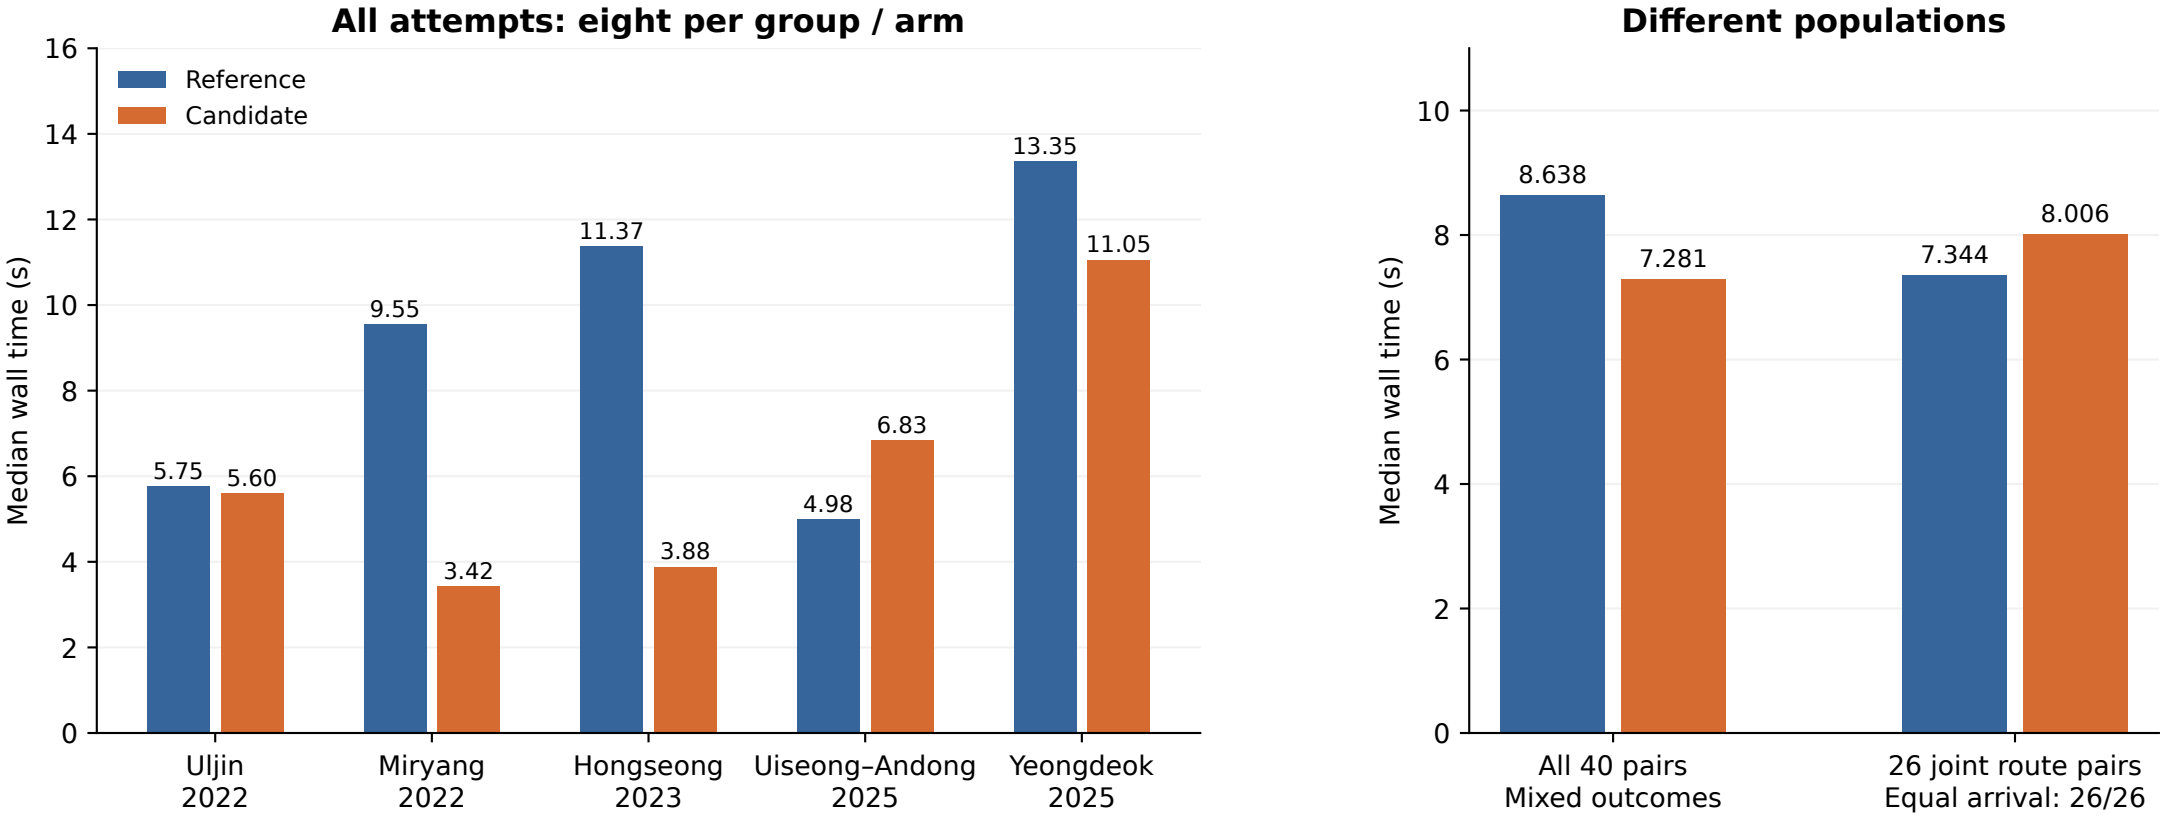
Wall time depends on which outcomes are compared

Complete-request time: imports, cold preparation, search, runtime checking and publication; cleanup / forecast / offline checks excluded



Median paired candidate/reference ratio: 1.00015 across all 40 pairs; 1.07552 across the 26 jointly resolved route pairs.
Ratios of arm medians differ (0.84296 / 1.09007). The mixed-outcome median does not establish faster successful routing; worker MAX_LABELS timeouts are not outer deadline stops.
