Recorded paired route with an active modeled source

Uljin • 2022-03-04 03:00Z • FX1 • repetition 1 • actual scored c651 traces, not a prospective field route

Both arms: arrival 3,119 s; identical recorded timed trajectory (512 EDGE legs); destination dwell to 3,239 s. Modeled source phase [0, 3,207.193) s.
All four members sampled no new ignition, despite 80 native positive-q cells. The shown cell is a declared emitting / contact footprint, not an observed flame perimeter.
Independent centre dose total ≈0.867638 kJ/m² includes supplied incurred dose ≈0.835420 kJ/m². Runtime road certificate and independent centre / contact checks have distinct scope.
Source: exact JOB / RESULT / graph / packet / independent-checker hashes in FIGURE_PROVENANCE.json. OSM historical road chords; no physical safety or distance-optimality claim.
