This is the sensor

The dashcam on this stand is the kind of camera wfglink reads: ordinary video, no special equipment.

What it measures in ordinary video

- Ember tracks
- Ember speed
- Count rate
- Cumulative Particle Count (gate)
- Particle Number Flux (projected)
- Ember-derived wind (estimate)

How it was checked

A turntable carrying LEDs at a known speed was filmed from above with this dashcam, and wfglink's speeds were compared with the true ones.

What it cannot do: see the limits card.
